

Dev Log 04 – Omar Al-Dib

1. WHAT I ACCOMPLISHED (Time taken approx. 5-6 hrs)

- +/- Tried working on Weather API separately from Ibrahim to see if either of us can figure it out, as his began crashing, we understood the basics however still not figured out how to fully implement it.
- +/-

2. WHAT I PLAN TO ACCOMPLISH BY NEXT TIME

- +/- There are many weather API's to choose from like Yahoos and openweather, so we have to decide which would be most ideal to the apps needs
- +/- Hopefully with the above resolved, we will be able to complete it, if not however, we may work on it using a fake gps

3. WHAT QUESTIONS/DIFFICULTIES AM I HAVING

- +/- Lots and lots and lots of crashes
- +/-

4. WHAT PROBLEMS DID I RESOLVE

- +/- May not be in best condition, but at least we have the weather api basics, we just need to fix a few bugs
- +/-
